Professional Summary

AI Engineer with 2.5+ years of industry experience building production-grade AI and cloud-native backend systems. Experienced in intelligent document processing, agent workflows, MCP applications, and AI orchestration, with strong expertise in Python, FastAPI, AWS, and scalable backend architecture. Proven track record of designing scalable solutions and automating complex workflows.

Skills

- **AI & GenAI**: LLMs, Generative AI, Agentic AI, Prompt Engineering, RAG, MCP, Intelligent Document Processing, Multi-Model AI, AI Model Orchestration
- **Programming**: Python, C++, Java, SQL
- **Backend & Cloud**: FastAPI, REST APIs, Microservices, LangChain, Distributed Systems, AWS, Docker, Kubernetes, Redis, PostgreSQL
- **Tools**: Git, Claude

Experience

- **Ngenux Solutions** — Hyderabad, India
  AI Engineer — *Feb 2026 - Present*

  AI-Powered Intelligent Document Processing (IDP) Framework
  - Developed a reusable Python-based IDP framework for complex documents, supporting configurable field extraction and multimodel AI orchestration using FastAPI and AWS.
  - Established consensus-based validation by comparing independent AI outputs and applying majority voting for extraction, normalization, and confidence-based verification.

  MCP Document Intelligence
  - Engineered a production-ready MCP server with 17 permission-controlled tools and interactive MCP Apps, enabling users to manage IDP workflows, inspect extraction results, and perform schema operations directly through AI assistants without switching dashboards.
  - Established Redis-backed budget controls, checksum-based document identification, safe schema workflows, dry-run/write protection, and Excel export for large results, improving workflow efficiency while reducing LLM context usage.

- **Decimal Point Analytics** — Nashik, India
  Software Development Engineer — *Mar 2024 - Jan 2026*

  Global Dealer Operations & Marketing Platform
  - Designed and implemented 100+ secure microservices and REST APIs with role-based access control, deployed in a multi-cloud environment.
  - Optimized distributed backend performance by 30% through region- and product-level data aggregation across multiple data sources. Strengthened system security and availability through cloud deployment and API gateway integration.

  Automation Alert System
  - Developed an event-driven automation system to extract, transform, and distribute financial data from multiple sources, reducing manual effort by 80%.
  - Automated distributed job scheduling and email delivery, enabling low-latency, reliable data pipelines and improving operational efficiency and decision-making.

Projects

AI-Powered Financial Insights Dashboard (Hackathon)
- Developed a scalable cloud-based financial insights dashboard using microservices and real-time data pipelines, with backend services designed for high availability and low-latency queries.
- Integrated AI models for portfolio diversification, risk assessment, and asset allocation, delivering intelligent recommendations and dynamic visualizations that improved analysis efficiency by 65%.

Certification

- Oracle Cloud Infrastructure 2024 Generative AI Certified Professional
- Certified as Problem Solver on HackerRank

Education

- **Sandip Institute of Technology and Research Center, (SPPU)** — Nashik, India
  Bachelor of Engineering - Computer Engineering; GPA: 8.7 — *2020 - 2023*
- **Government Polytechnic, Dhule, (MSBTE)** — Dhule, India
  Diploma - Computer Engineering; Aggregate: 84.40 — *2017 - 2020*
